90.	[Canc	elled]
91.	1. A process of screening a substance for its ability to interact with an opioid receptor, said rocess comprising the steps of:	
	a)	expressing a recombinant opioid receptor polypeptide encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:1;
	b)	contacting said substance with the opioid receptor polypeptide; and
	c)	detecting the ability of said substance to interact with said opioid receptor

polypeptide.

- 92. The process of claim 91, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 40 contiguous bases of SEQ ID NO:1.
- 93. The process of claim 92, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 50 contiguous bases of SEQ ID NO:1.
- 94. The process of claim 93, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 75 contiguous bases of SEQ ID NO:1.
- 95. The process of claim 94, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 100 contiguous bases of SEQ ID NO:1.
- 96. The process of claim 95, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 680 contiguous bases of SEQ ID NO:1.
- 97. A process of screening a substance for its ability to interact with an opioid receptor, said process comprising the steps of:
  - a) expressing a recombinant opioid receptor polypeptide encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:11;
  - b) contacting said substance with the opioid receptor polypeptide; and
  - c) detecting the ability of said substance to interact with said opioid receptor polypeptide.
- 98. The process of claim 97, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 40 contiguous bases of SEQ ID NO:11.
- 99. The process of claim 98, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 50 contiguous bases of SEQ ID NO:11.

- 100. The process of claim 99, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 75 contiguous bases of SEQ ID NO:11.
- 101. The process of claim 100, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 100 contiguous bases of SEQ ID NO:11.
- 102. The process of claim 101, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 680 contiguous bases of SEQ ID NO:11.
- 103. A process of isolating a substance with an ability to act as a specific agonist of a kappa opioid receptor, said process comprising the steps of:
  - a) providing an opioid receptor polypeptide comprising a second extracellular loop and encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:1;
  - b) contacting said opioid receptor polypeptide with a composition comprising said substance;
  - c) detecting the ability of said substance to interact as an agonist with said opioid receptor; and
  - d) isolating said substance if the ability of said substance to specifically interact with the opioid receptor is detected.
- 104. The process of claim 103, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 40 contiguous bases of SEQ ID NO:1.
- 105. The process of claim 104, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 50 contiguous bases of SEQ ID NO:1.

- 106. The process of claim 105, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 75 contiguous bases of SEQ ID NO:1.
- 107. The process of claim 106, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 100 contiguous bases of SEQ ID NO:1.
- 108. The process of claim 107, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 680 contiguous bases of SEQ ID NO:1.
- 109. A process of isolating a substance with an ability to act as a specific agonist of a kappa opioid receptor, said process comprising the steps of:
  - a) providing an opioid receptor polypeptide encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:11;
  - b) contacting said opioid receptor polypeptide with a composition comprising said substance;
  - c) detecting the ability of said substance to interact as an agonist with said opioid receptor polypeptide; and
  - d) isolating said substance if the ability of said substance to interact with the opioid receptor polypeptide is detected.
- 110. The process of claim 109, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 40 contiguous bases of SEQ ID NO:11.
- 111. The process of claim 110, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 50 contiguous bases of SEQ ID NO:11.
- 112. The process of claim 111, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 75 contiguous bases of SEQ ID NO:11.

- 113. The process of claim 112, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 100 contiguous bases of SEQ ID NO:11.
- 114. The process of claim 113, wherein said opioid receptor polypeptide is encoded for by a nucleic acid sequence comprising at least 680 contiguous bases of SEQ ID NO:11.
- 115. A process of screening a substance for its ability to interact with an opioid receptor comprising:
  - a) expressing either (1) a recombinant opioid receptor polypeptide encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:1 or (2) a recombinant opioid receptor polypeptide comprising the second extracellular loop and encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:11;
  - b) contacting said substance with the opioid receptor polypeptide; and
  - c) detecting the ability of said substance to interact with said opioid receptor polypeptide.
- 116. The process according to claim 115, wherein said opioid receptor polypeptide is a chimeric opioid receptor polypeptide.
- 117. The process of claim 116, wherein one polypeptide of the chimeric opioid receptor polypeptide comprises the second extracellular loop of kappa opioid receptor.
- 118. The process of claim 116, wherein one polypeptide of the chimeric opioid receptor polypeptide comprises the third extracellular loop of kappa opioid receptor.
- 119. The process of claim 116, wherein the chimeric opioid receptor polypeptide comprises polypeptide portions of both kappa and delta opioid receptors.

- 120. The process according to claim 116, wherein the chimeric opioid receptor polypeptide comprises  $\kappa_{1-78}/\delta_{70-372}$  or  $\delta_{1-69}/\kappa_{79-380}$ .
- 121. The process according to claim 115, wherein the opioid receptor polypeptide is a kappa opioid receptor polypeptide having the sequence of SEQ ID NO:2 or SEQ ID NO:12.
- 122. The process of claim 121, wherein said opioid receptor polypeptide is a kappa opioid receptor polypeptide encoded for by the polynucleotide of SEQ ID NO: 1.
- 123. The process of claim 121, wherein said opioid receptor polypeptide is a kappa opioid receptor polypeptide encoded for by the polynucleotide of SEQ ID NO: 11.
- 124. A process of isolating a substance with an ability to act as a agonist of a kappa opioid receptor comprising:
  - a) providing a recombinant opioid receptor polypeptide that includes the second extracellular loop and that is encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:1 or SEQ ID NO:11;
  - b) contacting said opioid receptor polypeptide with a composition comprising the substance;
  - c) detecting the ability of the substance to interact as an agonist with the opioid receptor polypeptide; and
  - d) isolating the substance if an ability of the substance to interact with the opioid receptor polypeptide is detected.
- 125. The process of claim 124, wherein the opioid receptor polypeptide is a chimeric opioid receptor polypeptide.

- 126. The process of claim 124, wherein one polypeptide of the chimeric opioid receptor polypeptide comprises the third extracellular loop of delta opioid receptor.
- 127. The process of claim 124, wherein the opioid receptor polypeptide comprises portions of both kappa and delta opioid receptors.
- 128. The process of claim 124, wherein the chimeric polypeptide comprises  $\kappa_{1\text{--}78}/\delta_{70\text{--}372}$  or  $\delta_{1\text{--}69}/\kappa_{79\text{--}380}$ .
- 129. A process of screening a substance for its ability to act as an agonist of a kappa opioid receptor comprising:
  - a) expressing either (1) a chimeric recombinant opioid receptor polypeptide encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:1 or (2) a chimeric recombinant opioid receptor polypeptide comprising the second extracellular loop and encoded for by a nucleic acid sequence comprising at least 30 contiguous bases of SEQ ID NO:11;
  - b) contacting said substance with the opioid receptor polypeptide; and
  - c) detecting the ability of the substance to interact as an agonist with the opioid receptor polypeptide.
- 130. The process of claim 129, wherein said nucleic acid sequence comprises at least 40 contiguous bases of SEQ ID NO:1.
- 131. The process of claim 129, wherein said nucleic acid sequence comprises at least 55 contiguous bases of SEQ ID NO:1.
- 132. The process of claim 129, wherein said nucleic acid sequence comprises at least 70 contiguous bases of SEQ ID NO:1.

- 133. The process of claim 129, wherein one polypeptide of the chimeric opioid receptor polypeptide comprises the second extracellular loop of kappa opioid receptor.
- 134. The process of claim 129, wherein one polypeptide of the chimeric opioid receptor polypeptide comprises the third extracellular loop of kappa opioid receptor.
- 135. The process of claim 129, wherein the chimeric opioid receptor polypeptide comprises polypeptide portions of both kappa and delta opioid receptors.
- 136. The process of claim 97, wherein the recombinant opioid receptor polypeptide comprises the second extracellular loop.
